

MIRI® II-12

Multiroom IVF Incubator

One Patient – One Chamber One Patient – One Chamber

The MIRI® II-12 multiroom IVF incubator dedicates one chamber for one patient to ultimately secure a minimum-stress environment for embryos. The chambers are completely independent of each other. Any disruption on one chamber (e.g. temperature drop after opening the lid) has zero impact on the rest of the system.

Key Features

Heated bottom

Provides direct heat transfer to the culture dishes for stable heat regulation.

Heated Lid

Prevents condensation and improves temperature regulation and recovery enhancing uniformity within each chamber.

Reliable gas mixing system

This allows gas phase flexibility. The gas mixer of MIRI® II-12 gives total control over CO₂ and O₂ concentration levels while also giving flexibility over what gas input is desired.

Multiroom System

The MIRI® II-12 multiroom IVF incubator have multiple independent chambers with very stable environments, allowing embryologist to culture embryos from individual patients in individual chambers.

Fast Recovery

One important benefit is the speed of recovering temperature and gas parameters after opening a chamber.

Stress-free validation of chamber parameters

The MIRI® II-12 can be connected to an external device such as the MIRI® GA for gas and temperature validation.

Built-in pH System

The MIRI® II-12 has a built-in pH system that the user can use to calibrate the pH meter and measure the pH of the media.

Touchscreen PC

Allows user to control and monitor important parameters (temperature, gas concentration) simultaneously and gives visual and audible alarm to signal critical conditions. It has large display that can be easily seen from a distance.

Full-featured Data Logging Software

The MIRI® II-12 multiroom incubator's data logging system provides a user-friendly interface for real-time monitoring of incubation parameters and historical data analysis. It enables precise pH calibration and measurement while allowing users to generate and export detailed reports directly from the incubator. This comprehensive system ensures accurate tracking and easy data management for every clinic's needs.
