

MIRI® Evidence

A traceability tool for fertility clinics

MIRI® Evidence is redefining the way traceability in laboratory procedures is managed and stored in fertility clinics, eliminating errors, preventing system mix-ups, saving time, and helping clinics to comply with regulations. This IVF traceability tool provides a single, secure platform that ensures all patients are scheduled on time and documented properly - saving time and improving outcomes across the board.

The MIRI® Evidence workflow proposes tools to improve scheduling and documentation procedures, refining both clinical and administrative processes in a fertility clinic.

Key Features

Tracking

The scanners used with MIRI® Evidence are 2D imager scanners with no laser from a market-leading supplier, and specially made for healthcare.

Compliance

MIRI® Evidence Tracking has been made to comply with the EDQM guidelines and EU regulations.

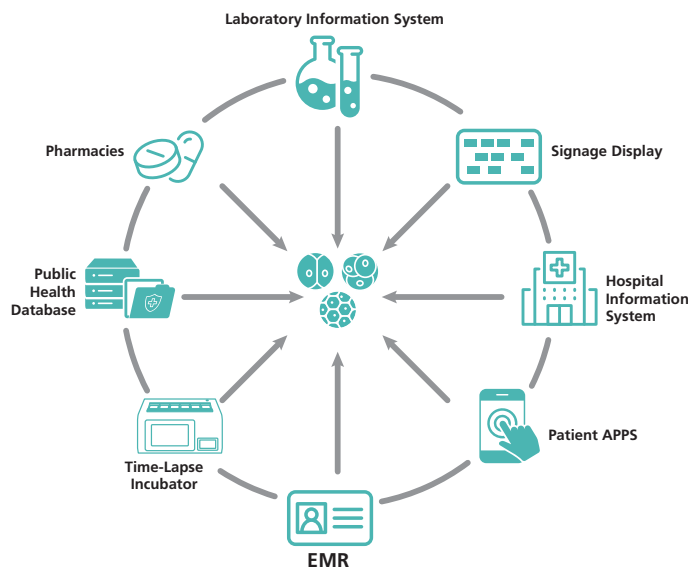

Workflow

The MIRI® Evidence workflow offers tools to enhance scheduling and documentation procedures, improving both clinical and administrative workflows in a fertility clinic.

Mix-up Prevention

Oocytes, embryos, and semen samples are tracked and validated in and out of the containers eliminating the need for human double-witnessing.

Integration

The integration points range from patient demographic data, financial input/output, and image transfer to the exchange of laboratory results ensuring the quality of exchanged information.

For other features, check out our Fertility Catalog or the MIRI® Evidence brochure.
